Allergy Safety Policy

This policy is compliant with the Allergy Safety in Schools statutory guidance published July 2026. It has been based on a template written and reviewed by the team at Anaphylaxis UK who have worked with the Department for Education on creating the Allergy Safety in Schools statutory guidance. The policy has been tailored and personalised to Hilltop First School.

1. Statutory Duties

The duties under Section 34 of the [Children's Wellbeing and Schools Act 2026](#) place a requirement on LA-maintained schools, Academies and PRUs to have allergy safety policies, publish them and keep them under review.

The duty of care under section 3 of the [Children Act 1989](#) for any person with the care of a child to do all that is reasonable for the purposes of safeguarding or promoting the welfare of the child.

The duties to safeguard and promote the welfare of pupils and students under sections 20 and 175 of the [Education Act 2002](#), the [Education \(Independent School Standards\) Regulations 2014](#) (and associated statutory guidance [Keeping Children Safe in Education](#)) and the [Non-Maintained Special Schools \(England\) Regulations 2015](#);

The duty of the employer under section 2 of the [Health and Safety at Work etc Act 1974](#) to take reasonable steps to ensure that employees are not exposed to risks to their health and safety;

The duties under the [Equality Act 2010](#) to provide equality of opportunity for all, including those who are disabled.

The Special Educational Needs and Disability (SEND) [SEND code of practice: 0 to 25 years. The Early Years Foundation Stage \(EYFS\) statutory framework](#).

2. Introduction and Core Principles

In line with Benedict's Law, we are committed to providing a safe, inclusive, and welcoming environment for all children, young people, staff, and visitors with allergies. Recognising the serious and potentially life-threatening risk posed by anaphylaxis, this dedicated policy establishes robust risk-mitigation measures and emergency response protocols.

Allergy is a spectrum of different allergic diseases. Reactions occur when a susceptible person is exposed to something (an "allergen") they are allergic to. Asthma, food allergy, eczema and seasonal rhinitis (hay fever) are all forms of allergy.

Anaphylactic reactions usually begin within minutes of being in contact with the allergen i.e. eating a trigger food, though can occur several hours later (i.e. allergy to Mammalian meat). Anaphylaxis involves difficulty in breathing and affects the heart rhythm. In extreme cases there could be a dramatic fall in blood pressure leading to collapse.

Once started, anaphylaxis reactions progress quickly. Investigations into fatal anaphylaxis show that there is only a 20-30 minute window of opportunity during which steps can be taken to prevent death – therefore giving emergency adrenaline **immediately** and calling Emergency Services (999) is crucial. **Anaphylaxis always requires an emergency response**

Anaphylaxis can occur without any other signs (such as a skin rash) being present. **Always consider anaphylaxis in someone with a known food allergy who has sudden difficulty in breathing.** Giving adrenaline in this context is very safe and may be lifesaving.

The most common causes of "whole body" allergic reactions – including anaphylaxis – are:

- foods (e.g. peanuts, tree nuts, cow's milk/dairy foods, egg, wheat, fish/shellfish and sesame);
- insect stings (e.g. bee, wasp);
- medication (e.g. antibiotics, pain medicines such as ibuprofen);
- latex (e.g. rubber gloves, balloons, swimming caps).

Even for food allergy, the vast majority of anaphylaxis reactions require the person to have eaten the food, although less serious allergic reactions can happen through skin or other contact. Anaphylaxis reactions due to skin contact are very rare. Pupils who have a skin reaction need monitoring for at least an hour.

Hilltop First School has a whole school awareness approach, because it ensures all staff and pupils are aware of what allergies are, the importance of the individuals' allergens, the signs and symptoms, how to deal with allergic reactions and to ensure procedures are in place to minimise risk of exposure.

Coeliac disease and food intolerance can present symptoms which are similar to those of food allergy; it is important that Coeliac disease and food intolerance is managed through dietary avoidance, but these conditions do not pose a risk of anaphylaxis and so they are not within this allergy safety policy.

Eczema, asthma and allergies sometimes occur together – known as the atopic triad. It is important that these are managed well in order to keep the individual healthy. Asthma training is needed by all staff and an individual's asthma care plan needs to be included with their individual healthcare plan. These conditions are not included in this allergy safety policy.

Hilltop First School understands that severe allergies are included in the Equality Act, 2010. The act considers a person disabled if they have a physical or mental impairment that has a substantial and long-term negative effect on their ability to carry out normal daily activities. Seasonal rhinitis (such as hay fever) is explicitly excluded from the definition of disability, unless it aggravates the effect of another health condition.

3. Emergency Treatment and Management of Anaphylaxis

What to look for:

Symptoms usually come on quickly, within minutes of exposure to the allergen.

Mild to moderate allergic reaction symptoms may include:

- a red raised rash (known as hives or urticaria) anywhere on the body
- a tingling or itchy feeling in the mouth
- swelling of lips, face or eyes
- stomach pain or vomiting
- mild throat tightness
- sudden change in behaviour

These symptoms are treated with antihistamines.

More serious symptoms are often referred to as the ABC symptoms and can include:

- **AIRWAY** - swelling in the throat, tongue or upper airways (tightening of the throat, hoarse voice, difficulty swallowing).
- **BREATHING** - sudden onset wheezing, breathing difficulty, noisy breathing, persistent cough.

- **CIRCULATION** - dizziness, feeling faint, sudden sleepiness, tiredness, confusion, pale clammy skin, loss of consciousness.

The term for this more serious reaction is anaphylaxis. In extreme cases there could be a dramatic fall in blood pressure. The person may become weak and floppy and may have a sense of something terrible happening. This may lead to collapse and unconsciousness and, on rare occasions, can be fatal.

As soon as anaphylaxis is suspected, adrenaline must be administered without delay.

Action:

- Keep the individual where they are, call for help and do not leave them unattended.
- **LIE the individual FLAT WITH LEGS RAISED** – they can be propped up if struggling to breathe but this should be for as short a time as possible.
- **USE ADRENALINE DEVICE WITHOUT DELAY** and note the time given. AAls should be given into the muscle in the outer thigh or nasal into the nostril. Specific instructions vary by brand – always follow the instructions on the device.
- **CALL 999** and state **ANAPHYLAXIS (ana-fil-axis)**.
- If no improvement after 5 minutes, administer second adrenaline device
- If no signs of life commence CPR.
- Call parent/carer as soon as possible.

Whilst you are waiting for the ambulance, keep the individual where they are. Do not stand them up, or sit them in a chair, even if they are feeling better. This could lower their blood pressure drastically, causing their heart to stop.

All individuals must go to hospital for observation after anaphylaxis even if they appear to have recovered as a reaction can recur after treatment.

4. Minimising Risk and Exposure to Allergens

Minimising risk and the exposure to allergens is central to ensuring that individuals with allergies are safe from harm. Even a small amount of allergen can cause a reaction. Any food can cause a reaction with serious consequences for the individual and Hilltop First School will only eliminate a food following a risk assessment supported by medical advice when necessary. Where a food is restricted, this will be to the smallest area for the time necessary; for example, the cooking room for the duration of the lesson when the pupil with allergy is cooking. Blanket bans, especially to nuts, create a false sense of security. Whilst there are 14 key food allergens that cause over 90% of reactions, any food can cause a reaction.

Hilltop First School is allergy aware ensuring that the staff, pupils and parents/carers are actively aware of the risk posed by allergens, take steps to minimise the risk of exposure and have robust emergency response plans in place.

Hilltop First School completes a school wide allergy risk assessment that seeks to minimise the risks of exposure to known allergens. The risk assessment will include:

- Identifying the food used within the curriculum and making adaptations to remove allergens that pose a risk for the whole group not just the pupil who has the allergy.
- Conducting specific risk assessments to manage the risks of exposure to allergens in individuals when planning external visits or trips
- Identify measures to manage risks of exposure to a food allergen through food brought in by others (for example, parents/carers, pupils, staff).
- Identify measures to manage the risks of exposure to a food allergen through food provided by the school.

- Putting in reasonable measures to manage the risk of individuals being exposed to allergens where they have a known allergy to airborne or contact allergens
- Identifying non-food allergens within the environment and making adaptations to remove/reduce allergens that pose a risk; for example, school dogs may require enhanced cleaning and limiting to specific areas, hygiene measures after pupils have worked with the therapy dog.

Hilltop First School will ensure that allergy is included in all school risk assessments to identify risks and plan control measures to minimise the risk of exposure.

Hilltop First School will ensure that the risk of exposure is minimised by

- All school staff receive allergy training every year
- Educating pupils through awareness assemblies and within PSHE
- Educating the Parent Teacher Association about school expectations for allergy management
- Communicating with all relevant visitors, temporary staff and cover staff if they are teaching a pupil with an allergy and ensuring that the member of staff has been trained in allergy and anaphylaxis emergency response
- Working closely with parents/carers and health professionals to understand any pupil and staff allergies
- Monitoring this policy to ensure that the agreed practices are implemented
- Establishing and maintaining high hygiene standards amongst staff, pupils and visitors

Food Provision and Catering:

Hilltop First School will manage the risk of food allergy and provide clear information on allergens in food provided in school through:

- Ensuring the contract with the school catering company (The Pantry) is compliant with the Food Standards Authority allergen management regulations
- Ensuring The pantry provides information on food allergens to parents/carers and have this available for the pupils to check independently
- Ensuring parents/carers provide updated information on food allergies directly to the Pantry when creating their child's account
- Providing the kitchen with a list of pupils with food allergies including photographs
- Informing The pantry directly when the school becomes aware of a new allergy in a pupil
- Enabling parents/carers to liaise with The Pantry team or school chef
- Identify pupils with allergies at point of service by ensuring every child has an up-to-date photograph associated with their Pantry account and that children are named as they are served.
- Ensuring that food is always labelled as unlabelled food poses a potentially greater risk of allergen exposure than packaged food with precautionary ("may contain") labelling suggesting a risk of contamination with allergen. This applies to foods used within the classroom curriculum (e.g. cooking) as well as that from the school kitchen or canteen.
- Teaching pupils not to food share, trade food or share utensils or food containers with the reasons why
- Where home baked items are brought in for the staffroom, a list of ingredients must be available on request.

When staff provide food for the pupils, they receive additional training to ensure they understand how to read labels for food allergens and how to prevent cross-contamination during the handling, preparation and serving of food.

Where food is not directly provided by the school (for example brought in as treats or to celebrate special events) parent/carer permission will be sought in advance to ensure inclusion and safety for pupils with allergies.

These procedures apply to school led breakfast and after school provision.

Ensuring that PTA events, as best practice, follow FSA (Food Standards Agency) legislation for food labelling, creating allergen matrices as necessary. Ensuring that PTA members who are serving food have a basic awareness of allergen management (signpost to free FSA training)

Pupils eligible for benefits based Free School Meals are entitled to their free school meal entitlement. Hilltop First School will work with parents/carers and the Pantry to determine the best way of ensuring that pupils receive their meal.

5. Medication and Adrenaline Devices (ADs)

People at risk of anaphylaxis are prescribed two adrenaline devices which they should carry with them at all times. This includes the journey to and from;

- school,
- the classroom
- lunch area
- playground
- sports field
- when on visits or trips

Serious anaphylaxis is a time critical situation; delays in administering adrenaline have been associated with fatal reactions. An adrenaline device needs to be administered within 5 minutes so if the adrenaline device cannot be with them in the classroom, the adrenaline device should be stored in an appropriate central location that is unlocked and accessible at all times (including during wrap around care).

Adrenaline devices must be stored at room temperature (in line with manufacturer's guidelines) and not be exposed to extremes of heat. They should not be refrigerated or left in direct sunlight.

At Hilltop First School, Pupil Adrenaline Devices are kept in a blue school bag in the relevant classroom cupboard and the 2nd Adrenaline Device kept in the office cupboard. This bag must accompany the child when they move around the school for lessons, lunchtimes or outdoor activities.

Staff with severe allergies are expected to keep their Adrenaline device within their immediate working environment. It is essential that all other members of their working team know where the device is kept.

Spare Adrenaline Devices

The [Human Medicines \(Amendment\) Regulations 2017](#) permit "spare" adrenaline devices to be used for the purpose of saving a life. This might be, for example, a child presenting for the first time with anaphylaxis due to an undiagnosed allergy.

Hilltop First School holds spare adrenaline devices for use in emergency situations. These are not a replacement for a pupil's own adrenaline device. Pupils prescribed adrenaline are expected to have their own adrenaline devices with them at school for use in an emergency.

Hilltop First School holds:

2 x Adult EpiPen (Adrenaline) Auto-Injectors 0.3mg

2 x child EpiPen (Adrenaline) Auto-Injectors 1.5mg Jr

These are located in:

The tall cupboard in the main admin office

They are stored in transparent containers and labelled 'Emergency Anaphylaxis Child Kit' and 'Emergency Anaphylaxis Adult Kit'

Our school Allergy Lead is Irene Jeffers.

The Allergy Lead is responsible for checking that adrenaline devices are in date and remain clear (not cloudy) on a half-termly basis. She will secure replacements one month before the current adrenaline device expires.

Adrenaline devices that are used will be given to the paramedic. Adrenaline devices that are out of date or where the adrenaline has degraded will be taken to a pharmacy to be disposed of.

6. In the event of anaphylactic reaction:

- Adrenaline should be administered as soon as possible, within five minutes. **Do not wait** to contact the emergency services before administering adrenaline.
- The child, young person or individual should not be moved. Adrenaline devices should be brought to them (whether their own prescribed ADs or “spare” ADs).
- If the child, young person or individual **has their own prescribed adrenaline devices**, these should be used in the first instance.
- If the child, young person or individual **does not have prescribed adrenaline devices**, “spare” adrenaline devices can be used.
- If the child, young person or individual’s **prescribed adrenaline devices are not available or misfire**, “spare” adrenaline devices can be used.
- If the individual has serious allergy and asthma and there is any doubt if they are presenting with anaphylaxis or having an asthma attack always administer the adrenaline first.

The [Human Medicines \(Amendment\) Regulations 2017](#) do not require consent to have been obtained for “spare” adrenaline devices to be used. It can be good practice for the school, college or setting to obtain advance consent from parents or the young person for “spare” adrenaline devices to be used, so that in an emergency, consent can be assumed to be in place. However, in an emergency situation anyone may take reasonable action to save a life without checking whether prior consent has been given.

Pupil self-management

Depending on their level of understanding and competence, pupils will be encouraged to take responsibility for and to always carry their own two adrenaline devices on them in a suitable bag/container (blue school drawstring bag)

Staff Training and Emergency Response

All staff, including teaching staff, support staff, catering staff and others who may oversee pupils including at breakfast or after school clubs will be trained in allergy awareness and emergency response. The school is responsible for ensuring that supply, cover, coaching and peripatetic staff have received allergy awareness training.

Training can be online or face to face. The content needs to include:

- Allergy awareness, the risks it poses, how allergic reactions occur and how to manage them
- Allergy includes multiple co-existing conditions: asthma, eczema, hay-fever
- Understand the difference between food allergy, intolerance and coeliac disease
- That a pupil can be allergic to any food, not just the top 14 allergens
- Know the symptoms of allergic reactions and how to treat
- Know the symptoms of anaphylaxis and how to treat
- How to locate and administer adrenaline or an asthma inhaler
- How to report an allergic reaction including
 - Mild to moderate

- Anaphylaxis
- Near miss/incident
- Understand their responsibilities in risk reduction to ensure that pupils prevented from coming into contact with their allergens
- Understand the impact that allergy can have on a pupil's wellbeing
- Understand the school's allergy safety policy and
 - How to check if a pupil is on the record of those with a known allergy
 - How to use an allergy or asthma action plan

Emergency preparedness

Throughout the year staff will be reminded of key aspects of the policy such as:

- how to find out who has an allergy
- the storage of spare adrenaline
- practice with adrenaline trainer devices

Hilltop First School will communicate key messages regarding risk reduction leading up to special events, trips and end of term celebrations.

During fire drills and lockdown practices, staff will ensure that a pupil's adrenaline device is with them. Should a real evacuation happen, the pupil may have to go home without adrenaline if this has not been taken out during a fire evacuation.

7. Roles and Responsibilities:

The named Allergy Lead is Irene Jeffers

The named Allergy governor is Chriss Pohl

The named member of the SLT responsible for allergy safety is the headteacher

Governing body

The governing body is responsible for ensuring that the school's policy sets out the arrangements to reduce the risk of individuals coming into contact with their known allergens and sets out the emergency response plan for cases of anaphylaxis. Hilltop First School have a named governor who works closely with the allergy lead and provides relevant updates to governors. The governing body will monitor this policy.

The Headteacher

The Headteacher is the member of the senior leadership team responsible for allergy safety which includes driving the implementation of the allergy safety policy and contributing to the review of the policy. The headteacher is responsible for:

- Ensuring the Allergy Lead has the training, time and resources to carry out their role effectively
- Training
 - ensuring that all staff receive annual training and that allergy is included in induction even for short term members of staff.
 - ensures that all staff have the opportunity to practice with trainer adrenaline devices at least annually but ideally a few times a year.
- Ensuring all staff have read and have regard for this policy
- Raising awareness of allergy safety to
 - Staff, through regular updates and reminders
 - Pupils to develop an understanding of allergy through information assemblies and workshops, participating in awareness days and weeks
 - Parents/carers through information and reminders in school newsletters and parent/carer information events
 - Ensuring all new parents/carers are made aware of the contents of this policy at Orientation meetings

The Allergy Lead

The allergy Lead assists the Headteacher in implementing the policy. The Allergy Lead is responsible for:

- Determining and following systems to collect allergy information during the enrolment process, ensuring that this information is shared with catering. Outside of the normal admission point, ensures that information is shared with staff and catering teams as soon as possible but within two weeks of the pupil starting
- Maintaining a register of pupils and staff with allergies including whether they hold adrenaline and whether they have an allergy action plan
- Ensuring that systems are robust for the identification of pupils at mealtimes
- Communication about:
 - The pupils who are on the allergy register
 - The importance of recording and reporting near misses and incidents
- communication with:
 - The headteacher and governors to provide updates about the policy implementation
 - Health and Safety and Designated Safeguarding Leads to keep allergy safety as part of their roles
 - Outside agencies such as Health and Safety Executive (HSE) if a report under RIDDOR is needed
 - Caterer; the procedures in the kitchen and the procedures for ensuring that the pupils with allergies are provided with a safe meal
 - Parents/carers to enable them to input into IHPs (Individual Healthcare Plans) and to request allergy action plans when appropriate
- Spare adrenaline devices and making sure these are checked and in date, with replacements being secured before the current ones expire
- That IHPs are created and communicated

All Staff

All staff are responsible for:

- Completing annual online Allergy Aware training
- Understanding their role in implementing this policy, recognising signs of allergic reactions, and acting swiftly in an emergency
- Being aware of the IHP of pupils in the class(es) which they regularly teach
- Implementing the pupil's IHP
- Creating an inclusive curriculum
- Adapting the curriculum where necessary to minimise risks
- Completing risk assessments for curriculum activities involving food, trips and visits including sporting events
- Building proactive relationships with parents/carers
- Reporting near misses and incidents

Parents/Carers

Parents and carers are responsible for:

- Adhering to this policy
- Providing school with the information they need to create individual health care plans
- Updating school when reactions happen outside of school or any changes to the pupil's allergy and its management.
- Ensuring that the pupil always has in date medication with them at school
- Taking into account information provided by the school when sending food items into school

8. Identification of Individuals with Allergies

Admissions Data Collection

Hilltop First School collects detailed medical information from parents/carers regarding known allergies, dietary restrictions, and treatment histories prior to admission. Parents/Carers of new pupils are required to complete the Medical and Dietary information questionnaire.

Information Sharing

UK GDPR does not prevent the sharing of a pupil's health information (special category data). Relevant information is securely compiled and shared as necessary in a controlled way with teaching staff, support staff, supply cover, and catering teams while maintaining appropriate data privacy. This is done through Arbor MIS and transferred to The Pantry using WONDE.

Transition

Allergy information and existing care plans are shared as part of a pupil's transition. Hilltop First School will request allergy information from the previous school or setting and will consider whether any of the arrangements are suitable to implement. Hilltop First School will work with parents/carers and the pupil if appropriate to write a new IHP. Staff will share information about pupils for transition visits ahead of a formal move.

Staff

Pre-employment questionnaires will ask whether they have any allergies. If an allergy is declared, there will be a discussion and action plan created to ensure that the member of staff has a safe working environment.

Visitors and regular volunteers

Will be asked about allergies ahead of their visit. If an allergy is declared, the allergy lead will be notified, and this information will be communicated as necessary to ensure that the visitor or regular volunteer has a safe working environment.

9. Pupil Individual Healthcare Plans (IHPs) and Allergy Action Plans

Allergy action plans

- These are clinical documents that are created by a GP / allergy nurse or allergy clinic. They detail the pupil's allergy and medication.
- These contain parent/carer contact details and must be signed by the parent/carer as this is the parental authority to administer medication including the administration of spare adrenaline devices.
- These will only be updated by the medical professional following a review of the pupil's allergy management, this could be annually or 5 yearly. Parents/carers or school need to update the photo of the pupil annually so that the pupil is recognisable.

Allergy action plans are issued for pupils who have an Immunoglobulin E (IgE) food allergy, and often a venom allergy, that could lead to anaphylaxis. They are not issued for all allergies. Pupils with non-IgE allergies don't experience anaphylaxis and so an allergy action plan is not issued.

Individual Healthcare Plans (IHPs)

Individual healthcare plans are an essential communication tool that provide clarity about the arrangements which need to be in place to ensure that a pupil is fully included in the life of the school. It will identify exact risk-mitigation measures that need to be followed.

Individual Healthcare Plans are school owned documents that are co-created by school, parents/carers and pupils. They should include any advice received from health professionals. If there is no advice from health professionals, information and support can be requested of the school nurses if this is needed.

Where a pupil has an allergy action plan and or an asthma plan, this must be included with the IHP.

It is good practice to review IHPs annually or when staff change however, they must be reviewed if an incident or near miss occurs. They need to be brought to the attention of supply or cover staff and be passed on during transition to a new school.

Hilltop First School will ensure that:

- Pupils with an allergy action plan and/or an asthma plan have an individual healthcare plan
- Pupils without an allergy action plan or asthma plan but have an allergy that needs active management over and above what other pupils need will have an individual healthcare plan
- Individual healthcare plans are created whilst pupils are waiting for a diagnosis

10. School Trips and External Visits

Hilltop First School ensures that pupils with allergies are fully included in every trip, sporting event, or extracurricular activities. A risk assessment addressing allergen exposure in each activity, emergency medication, transport, and proximity to local emergency care will be undertaken with control measures identified. In order to ensure that the pupil is safe and included, alternative activities will be planned. This will include the safe storage of adrenaline for the duration of the school trip.

Staff leading school trips will ensure they carry all relevant emergency supplies. Trip leaders will check that all pupils have their medication including adrenaline devices with them before departure. Pupils unable to produce their required medication will not be able to attend the excursion.

In conjunction with the allergy lead, the trip leader will review the risk assessment to determine whether the school's spare adrenaline devices should be taken on the trip. Hilltop First School will provide additional spare adrenaline devices should the risk assessment for the trip deem necessary to take them ensuring that pupils remaining in school still have access to spare adrenaline devices should the need arise.

Hilltop First School will notify the host school, when arranging a sporting fixture, that a member of the team has an allergy. When a food is provided during any trip, the trip lead will ensure the pupils' allergies are communicated and appropriate food is provided.

11. Serious Incidents and "Near Misses"

Hilltop First School approaches serious incidents and "near misses" in a "no blame" spirit, seeking to learn lessons and address any issues which the incident identified, so that pupils and staff are better protected in the future.

Hilltop First School is aware, when an incident occurs that materials such as residues of food consumed or handled or samples of fluids may constitute evidence, which may need to be seized and retained.

Hilltop First School uses the Local Authority reporting tool to record allergic reactions (incidents) and near misses (e.g., accidental exposure without reaction, or labelling errors) immediately. The incident or near miss will be reviewed and a report written.

Hilltop First School will share the report with the pupil's parents/carers and the individual involved. They should be given the opportunity to discuss what happened and to contribute their views to the consequent

lessons learned review. Hilltop First School will confirm what it has learned from the incident and outline any actions it is taking as a result. The pupil's IHP will be updated if necessary.

Near misses involving staff with severe allergies will be recorded and reviewed in the same way.

If unsafe food was supplied by the school operating as a food business, the incident must be reported to the local authority environmental health team.

12. Wellbeing and Support

At Hilltop First School allergy safety is a priority and actions to ensure that pupils are included and safe are embedded into the school's culture. Pupils with an allergy can become anxious as a result of the risk of exposure to allergens and the potential for anaphylaxis, which may be compounded by living with difficult-to-control asthma or eczema.

Hilltop First School:

- Regularly communicate to pupils, parents and staff about allergies, ensuring ongoing awareness and appreciation of the severity of the potential risks
- Includes allergy and anaphylaxis lessons during assembly, tutor time or in PSHE
- Plans school celebrations, rewards, and communal events inclusively from the outset to eliminate social isolation
- Understands that allergy bullying is extremely serious and actively monitors, prevents, and addresses any stigmatisation or bullying directed at individuals due to their allergies or dietary constraints
- Invites new joiners with allergies and their parents/carers to have a tour of the kitchen and lunch hall so they can meet staff and get used to the mealtime environment which may help to reduce anxiety and enable staff to identify pupils with allergies in the lunch hall
- Has proactive engagement with the parents/carers of new joiners with known allergies, sharing the school policies and the support available

13. Safeguarding

Hilltop First School recognises that a safeguarding referral may be needed if an incident highlighted concern that the child or young person might be at an increased risk of being neglected, abused or exploited by persons inside or outside of their family unit because of their medical condition. This might occur where relevant information about a child or young person's medical condition is not provided to a school or where they are repeatedly sent without essential medication, thereby putting the individual at risk.

Unacceptable practice

Hilltop First School staff are clear about what constitutes unacceptable practice and are committed to ensuring that only good practice occurs. Should unacceptable practice occur the school will follow its own procedures to identify and address this using staff conduct policies.

Examples of unacceptable practice include (but are not limited to):

- Preventing children and young people from easily accessing and administering their medication in line with what is agreed in their Individual Healthcare Plan (for example prescribed adrenaline devices and asthma reliever inhalers) when and where necessary;
- Assuming that every child with the same condition requires the same support;
- Assuming that older children and young people do not require support related to their allergy, even if they are able to take increasing responsibility for its management;

- Ignoring the views of the child or young person or their parents or carer;
- Ignoring medical evidence or the opinion and advice of healthcare professionals;
- Assuming that a child or young person does not have an allergy because they do not yet have a diagnosis, for example while medical investigation is under way;
- Sending a child or young person who becomes unwell to a school office or medical room without suitable supervision. In the case of an emergency or suspected emergency (for example anaphylaxis) help should come to the child or young person;
- Penalising children or young people for their attendance record if their absences are related to their medical condition, e.g. Hospital appointments and health management. This should be reflected in attendance policies;
- Requiring parents/carers (or otherwise making them feel obliged) to attend the school to administer medication or provide medical support to their child; or
- Preventing children and young people from participating or creating unnecessary barriers to them participating in any aspect of school, college or setting life, including external visits and trips, e.g. By requiring parents to accompany the child.

14. Policy Review and Publication

This policy is published openly on the school website and is reviewed at least annually, or more frequently in response to local incident trends or updated statutory guidelines.

15. Linked Documents

- Attendance Policy
- First Aid Policy
- Managing
- Anti-bullying Statement
- Health & safety Policy
- Administering Medicine and Managing Medical Conditions Policy
- Managing Medical Conditions Policy
